PATIENT NAME	DEEPAK DAS	Registered Date	09/09/2024 13:00
Bill No	19200	Collection Date	09/09/2024 13:00
Age/Gender	30 YRS/Male	Reported Date	09/09/2024 15:56
Report Status	Approved	DIC-B3	Referred By
			DR PRAKASH JHA MD (DONAR)

Test-Name	Results	Biological Reference Range	Units
<b>SEROLOGY</b>			
TSH	10.08	(0.3-4.50 uIU/ml)	uIU/ml
Sample- Serum, plain, Method-Fully-auto chemiluminescence immunoassay analyzer (Maglumi 800)			

**REFERENCE RANGE IN uIU/mL**

**Pregnancy**

1st Trimester	0.30-4.50
2nd Trimester	0.50-4.60
3rd Trimester	0.80-5.20

Not : 1. TSH levels are subject to circadian variation, reaching peak levels between 2-4 a.m . and at a minimum between 6- The variation is of the order of 50 % , Hence time of the day has influence on the measured serum TSH concentrations.

2. Recommended test for T3 and T4 each unbound fraction or free levels as it is metabolically active.
3. Physiological rise in total T3/T4 levels is seen in pregnancy and in Pregnancy and in Patients on steroid therapy.

**Clinical use :**

- Primary Hypothyroidism
- Hyperthyroidism
- Hypothalamic - Pituitary Hypothyroidism
- Inappropriate TSH secretion
- Non thyroidal illness
- Autoimmune thyroid disease
- Pregnancy associated thyroid disorders
- Thyroid dysfunction in infancy and early childhood

**INTERPRETATION**

KFT are simple tests that measure certain substances in your blood and urine. These substances are related to filtration in kidneys which give an idea of kidney function. These tests mainly detect levels of serum creatinine and blood urea nitrogen, which are done through blood test. A

24-hour urine sample may be taken to detect creatinine clearance from the body and filtration rate of the kidneys. There are other parameters like protein, albumin, minerals, electrolytes etc.. which may also be checked depending on the type of kidney tests.

**INTERPRETATION:**

This is intended to discuss a useful way of thinking about liver tests. It emphasizes limitations of and alternative explanations for isolated abnormalities of common liver test results. It also provides information on the initial screening test to be chosen, their interpretation, and the tests needed to confirm the diagnosis of common liver disorders based on current recommendations. Information in this chapter should be combined with discussions of specific liver diseases in the Disease Management. A final caveat relates to terminology. Tests done in clinical laboratories do not measure any functional capacity of the liver. Hence, the commonly used term liver function test is inaccurate, and the term liver tests. Guidelines on the interpretation and evaluation of abnormal liver test results have been published. Useful algorithms are presented that parallel the recommendations.
